

EVENT BIOSECURITY PLAN

A.Risk detection – critical points

- 1, Horses entrance into the area
- 2, Horses stabling
- 3, Horses and people movement around the area
- 4, Horses exiting the area

B.Risk prevention and minimalization

1,Area entrance – horses identification and health examination

- **Horses Identification** and health examination, during an arrival at the event, is going to take place in the exterior, outside of the area
- this space is located in front of the area at the gate num.10 (check the map), the security will be present there as well
- Horse identification includes taking the number of the microchip, passport control, validation of the vaccination against flu and other infectious diseases, based on relevant FEI rules, and negative result of infectious horse anemia, not older than 6 months

- mandatory negative PCR test on EHV-1 for all the horses transported by an airplane with a date of sample collection no longer than 96 hours before arrival
- **horses health examination** includes temperature check and basic clinical examination
- based on the level of body temperature and presence of clinical symptoms the horses will be divided into :
 - ❖ **healthy** (body temperature 36,5 – 38,5, without any clinical symptoms of the disease) with granted entrance into the area
 - ❖ **Suspicious of the disease** (body temperature 38,5 – 39,0 and/or clinical symptoms present) are going to be stabled in quarantied stables and monitor based on the specific protocol in accordance to FEI VRs
 - quarantine stables are located in the exterior, outside of the area, around 2km away from the entrance gate num.10
 - ❖ **Sick** (body temperature above 39,0 and/or clinical symptoms present) are going to be baned from the area
- Owner/person in charge will be asked to show FEI self-certification, based on relevant FEI rules before entering the area
- parking spots are going to be reserved between objects B15, B52 and B50.2 (check the map)

2, Horses stabling

boxes preparation before the arrival of the horses :

- ❖ horses are going to be placed in the winter stables (check the map)
- ❖ all boxes will be cleaned up, disinfected and sealed
- ❖ map with the stabled horses will be available before the horses arrival

- **horses stabling :**
 - ❖ all horses will be stabled using one-way system
 - ❖ horses from the same transport will be stabled together
 - ❖ horses vaccinated against EHV will be stabled in the separate stable (if they were not from the same transport as non-vaccinated horses), check the map
 - ❖ In order to avoid nose-to-nose contact we advise the PR to hang the sails

- **horse control in the stables**
 - ❖ It is required to check the body temperature of the horse twice a day and recording of the results in the table is which will be available to the riders/PR

3, Horses and people movement around the area

In consideration of the presence of non-competing horses in the area and also parallel progress of national jumping competition, the area will be strictly divided into zones (check the map) reserved separately for endurance competition, private stables and national jumping competition, which will not interfere and are also built to avoid any contact between horses from different groups. Each event (zone) has its own entrances and exits from the area, stabling spaces, riding spaces and competing, and also hygienic facilities.

- **Measures :**

- ❖ disinfectants will be available at all important entrances (check the map)
- ❖ Only necessary number of people will be allowed in the stable
- ❖ no general public allowed at the event
- ❖ current rules of dog control (FEI General Regulations, Article 109.13) are going to be under stricter control
- ❖ increased spacing at all important places, like horses cooling, veterinary examination, and relax space for horses will be secured during the competition

4, Horses exiting the area

Microchip or passport must be scanned before every exit of the horse from the area of competition, using FEI Horse App, to ensure traceability in the event of the outbreak

C.Elimination

Measures in the event of the outbreak of the disease in the area of competition, will be handled accordingly to the emergency plan.
